- AWS
- DigitalOcean
- Heroku
- Netlify
- Elasticsearch
- GatsbyJS
- DRM(Digital Right Management)
- Git

**Design Skills**
- Adobe Illustrator
- Adobe Photoshop
- Adobe AfterEffect
- Adobe Premiere
- Adobe XD
- Sketch
- Figma
- InVision

## EXPERIENCE

LogicLogic Inc, Tokyo, June 2016 - Present
**Software Developer**
- Worked in a fast-paced environment where I released a new function for our Ruby on Rails CMS for video on demand platform almost every month. Function examples include a timeline function, integration with third-party CRMs, batch processing, a form plugin, a usage calculation, a multi-tenant application.
- Established the entire architecture for the live streaming and video on demand for the 2018 FIFA World Cup of NHK. I set up the infrastructure on AWS, developing the CMS and RESTful APIs, and website.
- First in my team to master using and integrating third-party platforms to our system, such as DRMtoday (key management service provided CastLabs) and AWS Elemental (platform for encoding, decoding, and transcoding).

Samurai Engineer School, Tokyo, August 2018 - Present
**Programming Instructor**
- Created an original curriculum, where I motivated and supported students to make their original web applications with Ruby on Rails to get a new job.

Self Employed, Tokyo, November 2014 - May 2016
- Created and improved a website mockup for a client by user tests as a front-end developer.
- Organized everything related to accounting for a start-up company.
